

Tire Pressure Solutions: OEM Agricultural Equipment

The tires on an Agricultural machine are one of the most critical parts of the operation. Oxbo recognizes this important issue and has teamed up with industry leader PressurePro to offer a Tire Pressure Monitoring System (TPMS).

- **High Temperature Alert & Display:** PressurePro will display a high temperature reading when pressure readings rise to a level of 202F, the temperature that the tire compound begins to break down.
- **Low and High Pressure Alerts:** PressurePro alerts drivers at 2 low pressure levels (12.5% and 25% drops) and at a high pressure level.
- The Monitor will alert the operator both **visually** and **audibly** when a problem occurs and will display that reading.

Advantages

- Reduces risk of roadside **downtime** due to tire problems
- Adds greater **safety** for drivers, vehicles, loads, property and others on the road
- Keeps equipment operating so it's **available** when you need it
- Lowers tire **maintenance costs**—only 30 seconds to check 10 tires vs. an average of 15 minutes by hand
- **Extends** tread life and reduces potential casing damage
