

# Catcher Bushing Options for Vineyard and Berry Harvesters

Oxbo is now offering two options for catcher bushings.

## Part Number: 100824 Machined Bushing

- Rough dull texture
- These are more expensive, but you are less likely to need to bore out the hole after installing in the catcher rail.
- Machined bushings might be a better option during the season if replacing a bushing in the field.
- Retail price \$10 each.

## Part Number: 161284 Molded Bushing

- Smooth shiny texture
- Less expensive, but more likely to require boring hole after installing on catcher rail.
- The molded bushings will require boring the hole after pressing into the catcher rail.
- Molded bushings might be a better option when performing maintenance on your harvester in your shop in the off-season when time allows and the proper drill is handy.
- Retail price \$6 each.

Catcher bearing reaming tool available for purchase (part number 931385).
